

November 20, 2018

Alex Azar
Secretary of Health and Human Services
U.S. Department of Health & Human Services
200 Independence Avenue, S.W.
Washington, D.C. 20201

Dear Secretary Azar,

On behalf of the Global Health Council's Global Health Security Roundtable, Global Health Security Agenda Consortium, and many individuals and organizations signed onto this letter, we would like to thank the Administration for its leadership at the recent Global Health Security Agenda (GHSA) Ministerial in Bali, Indonesia on November 7 and 8, 2018. Commensurate with this strong commitment, we advocate for robust funding to support the GHSA within the Administration's FY2020 budget request to Congress, and we look forward to the timely release of the Administration's Global Health Security Strategy.

In light of the dangerous outbreaks of Ebola in the Democratic Republic of the Congo's North Kivu region, we were pleased to see the U.S. delegation in Bali recommit to the activities and goals of the GHSA through 2024. These activities—building local capacity and improving capabilities to prevent, detect, and respond to future disease outbreaks—are exactly what is needed to address this current Ebola outbreak, and to make sure worldwide efforts to strengthen global health security succeed.

Because the weakest link in the global system for stopping outbreaks at the source poses a direct threat to America's health and national security, we were encouraged to see the importance of domestic and global health security investments reflected in the National Biodefense Strategy, released in early September. To complement these statements and to further clarify the future of U.S. global health security efforts, we respectfully request the timely release of the Global Health Security Strategy as required by Congress in the FY 2018 omnibus appropriations bill. We hope this strategy will include multi-year cost estimates for supporting the GHSA and an outline of how U.S. efforts to improve global health security around the world will continue over the next five years.

Finally, we believe it also vital for the U.S. government to commit sufficient resources to achieve bilateral and multilateral health security objectives. As you noted in your remarks to the GHSA Ministerial, "For the United States—and for many of our partners—[global health security] is a national security priority. ...the United States is ready and eager to do its part, by working hard domestically to be one of the 100-plus countries to help achieve the GHSA 2024 target." To achieve full implementation, and therefore, success in stopping future outbreaks of deadly infectious diseases, we call for the Administration to provide robust funding in the FY2020 budget request for global health security programs at the Department of Health and Human Services, including Centers for

Disease Control and Prevention, the U.S. Agency for International Development, the U.S. Department of Defense, and the U.S. Department of State.

We appreciate your continued support for global health security and the GHSA, and we look forward to working with you and other Administration officials to continue meaningful progress toward the finish line of a world that is genuinely safe and secure from global health threats posed by infectious diseases.

Sincerely,

Ashley Arabasadi
